

 AMROHA POLICE CYBER SECURITY INTERNSHIP PROGRAM (APCSIP-2026)

Cyber Policing, Cybercrime Investigation & Digital Forensics

A Comprehensive Study of Law Enforcement Workflows, OSINT, and Forensic Analysis

PRESENTED BY

HIMANSHU BHARTI

Roll No: CS-23411188

B.Tech CSE (Cybersecurity) | Batch 2023-27

INSTITUTION & MENTORSHIP

IILM University, Greater Noida

School of Computer Science & Engineering

Under: Shri Lakhan Singh Yadav (SP Amroha)

Organization & Program Overview

Understanding the operational structure of Amroha Police Cyber Cell and the mandate of the APCSIP-2026 flagship initiative.

| Amroha Police & APCSIP Initiative

Amroha Police Cyber Cell

Functioning under Uttar Pradesh Police led by SP Shri Lakhan Singh Yadav, the Cyber Cell operates at the district level to mitigate financial cyber fraud, social media harassment, and digital security threats in coordination with national frameworks like I4C and NCRP.

APCSIP-2026 Capacity Building

The Cyber Security Internship Program (APCSIP-2026) is a specialized initiative designed to bridge academic cybersecurity knowledge with ground-level law enforcement execution, field investigations, and evidentiary procedures.

| Problem Statement & Objectives

⚠ Rising Cyber Threat Landscape

Surge in UPI financial frauds, phishing, identity theft, and cyberstalking poses a severe threat to public trust and district security.

🎯 Operational Challenges

Law enforcement requires skilled digital evidence preservation, CDR/IPDR correlation, and strict chain-of-custody compliance under Indian cyber laws.

| Core Program Focus Areas

Cyber Policing

Study of complaint intake workflows via NCRP portal, freeze mechanisms for defrauded money, and inter-agency coordination with banks.

Digital Forensics

Hands-on exposure to disk imaging, volatile memory extraction, hash verification, and mobile device artifact examination.

Cyber Law & OSINT

Applying IT Act 2000 & BNS provisions alongside Open Source Intelligence tools (Shodan, Maltego) to map criminal digital footprints.

| Tools & Technologies Used

Tool / Platform	Category	Investigative Application
National Cyber Crime Portal	Government Portal	Citizen complaint registration, financial fraud ticketing, and bank freeze dispatch.
Wireshark	Network Analysis	Packet sniffing, protocol decoding, and traffic analysis during live network incidents.
Autopsy / FTK Imager	Digital Forensics	Bit-stream disk imaging, deleted file recovery, hash calculations, and timeline analysis.
OSINT Tools (Shodan / Maltego)	Intelligence	Domain verification, IP geolocation mapping, and open-source suspect profiling.
CDR / IPDR Telecom Logs	Data Analytics	Correlating call detail records, cell tower locations, and IP assignment logs.

Cyber Crime Investigation Workflow

Complaint Logging

Report registered on cybercrime.gov.in or station desk.

Evidence Preservation

CDR/IPDR requested & write-blocked drive imaging.

Forensic Analysis

Artifact recovery, log parsing, and OSINT lookup.

Legal Charge-Sheet

Evidence compiled with certificate under Indian Evidence Act/BNS.

Practical Methodology & Training

The program adopted a multi-stage practical methodology combining officer interactions, technical demonstrations, and field assignments.

Interns engaged in live case studies involving UPI fraud tracing, fake social media profile takedowns, and public cyber awareness drives.

| Program Impact & Key Metrics

100%

HANDS-ON FIELD EXPOSURE

🌟 Verified Certification

Successfully awarded Certificate No. **APCSIP/2026/387** by Shri Lakhan Singh Yadav, Superintendent of Police, Amroha.

Gained deep procedural mastery over statutory cyber policing, financial fraud lien creation via I4C, and digital forensic chain of custody.

| Key Learnings & Skill Outcomes

- ✓ **End-to-End Cyber Crime Lifecycle:** Mastered the workflow from initial citizen complaint registration to financial asset freezing and suspect charge-sheeting.
- 🔧 **Forensic Evidence Admissibility:** Learned physical drive seizure protocols using hardware write-blockers and generating SHA-256 hash validation reports.
- 📍 **Telecom & CDR Analytics:** Acquired skill in parsing raw cellular logs to reconstruct suspect movements and network communication graphs.
- 📣 **Cyber Hygiene Outreach:** Participated in community outreach campaigns educating citizens on preventing digital arrest scams and financial fraud.

CONCLUSION & SUMMARY

Empowering Next-Gen Cyber Resilience

The Amroha Police Cyber Security Internship Program provided invaluable practical insights into the intersection of technology, digital forensics, and law enforcement — transforming theoretical cybersecurity education into real-world public protection capability.

 DISCUSSION

Questions & Answers

Thank you for your attention and guidance.
