

Report
Of

**AMROHA POLICE CYBER SECURITY INTERNSHIP
PROGRAM (APCSIP-2026):
A Study on Cyber Policing, Cybercrime Investigation and
Digital Forensics**

Submitted
To

**School of Computer Science and Engineering
IILM University, Greater Noida, U.P.**

In partial fulfilment of the requirement of degree of
B.Tech CSE (Cybersecurity)

By

**Roll Number of Student: CS-23411188
Name of Student: HIMANSHU BHARTI
Batch: 2023-27**

CANDIDATE'S DECLARATION

I, Himanshu Bharti, Roll No. CS-23411188, do hereby declare that the internship report titled “Amroha Police Cyber Security Internship Program (APCSIP-2026): A Study on Cyber Policing, Cybercrime Investigation and Digital Forensics” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering (Cybersecurity). All the references have been quoted and I have not taken as such any material from any other source. I affirm that this report is my own work and has not been submitted to any other institute for any degree/diploma requirement, and I shall be solely responsible for any kind of copyright violation in this regard.

Student Name: Himanshu Bharti

Roll No.: CS-23411188

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout the Amroha Police Cyber Security Internship Program (APCSIP-2026). I am thankful for their aspiring guidance, invaluable constructive criticism and friendly advice during this work.

I express my sincere gratitude to Shri Lakhan Singh Yadav, Superintendent of Police, Amroha, and the entire Cyber Cell team of Amroha Police for their mentorship, for sharing their truthful and illuminating views on cyber policing and cybercrime investigation, and for giving me the opportunity to be a part of this internship program.

I would also like to thank the School of Computer Science and Engineering, IILM University, Greater Noida, for their continuous encouragement and for providing me the platform to undertake this internship.

Finally, I express my gratitude to my parents and friends for their constant support and blessings.

Signature:

Student Name: Himanshu Bharti

INTERNSHIP COMPLETION CERTIFICATE

Certificate of Completion – Amroha Police Cyber Security Internship Program (APCSIP-2026)

CHAPTER 4: PROJECT DESCRIPTION

4.1 Introduction

With the rapid digitalization of financial services, communication, and governance in India, cybercrime has emerged as one of the most pressing law-and-order challenges of the present decade. Offences such as online financial fraud, phishing, identity theft, social media impersonation, and cyberstalking have grown sharply in scale and sophistication, often outpacing the technical capacity of conventional policing structures. In response to this challenge, district police units across Uttar Pradesh have begun building dedicated cyber cells and launching structured capacity-building programs to bridge the gap between technology and law enforcement.

The Amroha Police Cyber Security Internship Program (APCSIP-2026) is one such initiative, organised by Amroha Police, functioning under the Uttar Pradesh Police, under the leadership of Shri Lakhan Singh Yadav, Superintendent of Police, Amroha. Conducted for the second consecutive year, the program is designed to give undergraduate students, postgraduate students, research scholars, and working professionals structured, practical exposure to cyber policing, cybercrime investigation, and digital forensics within a real law-enforcement framework. This report documents my learning, observations, and work undertaken during this internship, which I completed in June 2026 as a B.Tech CSE (Cybersecurity) student of IILM University, Greater Noida.

As a student actively involved in cybersecurity beyond the classroom — including my role as Vice President of the Cybersecurity Club at IILM University and as a Student Coordinator at IGNITE TECHFEST — this internship offered a valuable opportunity to apply theoretical concepts of cyber law, network security, and digital forensics to real investigative scenarios encountered by a functioning police cyber cell.

4.2 Organization Profile

Amroha Police is a district unit of the Uttar Pradesh Police, responsible for maintaining law and order, crime prevention, and criminal investigation within the Amroha district of Uttar Pradesh. Like other district police forces in the state, Amroha Police operates a dedicated Cyber Cell tasked with handling complaints related to online financial

fraud, social media crimes, cyberbullying, hacking, and other technology-facilitated offences.

The Cyber Cell functions under the overall supervision of the Superintendent of Police (SP), Amroha — Shri Lakhan Singh Yadav — and works in close coordination with the Indian Cyber Crime Coordination Centre (I4C) under the Ministry of Home Affairs, which enables inter-state tracking of cybercriminals, sharing of threat intelligence, and access to the National Cyber Crime Reporting Portal. The Cyber Cell also conducts regular public awareness drives in schools, colleges, and local communities to promote safe digital practices and reduce the incidence of cyber fraud.

Recognising the shortage of trained cyber-forensic manpower within police departments, Amroha Police launched the Cyber Security Internship Program to build a pipeline of technically skilled youth who understand both the technological and procedural/legal dimensions of cybercrime investigation. The program is entirely free of cost for selected candidates and draws applicants from engineering, computer applications, and science backgrounds from across the region.

4.3 Problem Statement

Despite a steady rise in cybercrime complaints across Uttar Pradesh — ranging from UPI and net-banking fraud to fake job and investment scams, sextortion, and social media impersonation — district-level police units continue to face a significant shortage of personnel trained in digital forensics, cyber law, and open-source investigation techniques. Investigating officers are frequently required to interpret technical evidence such as call detail records (CDRs), IP logs, and device images without dedicated technical training, which can slow down investigations and reduce the rate of successful prosecution.

There also exists a wider gap between academic cybersecurity education, which tends to emphasise theoretical and offensive/defensive security concepts, and the practical, procedural, and legally constrained environment of an actual police cyber cell, where the chain of custody, evidentiary standards, and coordination with statutory bodies such as I4C are as important as technical skill. The APCSIP-2026 internship was designed specifically to address this gap by placing technically inclined students directly within the working environment of a district cyber cell.

4.4 Project Objectives

The broad objectives defined for this internship were as follows:

- To understand the organisational and procedural framework within which cyber policing operates at the district level.
- To gain hands-on exposure to the lifecycle of a cybercrime investigation, from complaint registration to case resolution.
- To learn the practical use of digital forensic and open-source intelligence (OSINT) tools used in evidence gathering and analysis.
- To study the relevant legal provisions governing cybercrime in India, including the Information Technology Act, 2000, and applicable provisions of the Bharatiya Nyaya Sanhita (BNS).
- To assist in cyber-awareness and citizen outreach activities conducted by the Cyber Cell.
- To analyse anonymised/illustrative case patterns and document key learnings in the form of this report.

4.5 Scope of the Project

The scope of the internship was limited to observational, training, and assistive activities within the Cyber Cell of Amroha Police, in keeping with the confidentiality and legal sensitivity of live criminal investigations. Interns were not granted access to personally identifiable data of complainants or accused persons, nor were they permitted to independently handle seized evidence; all forensic demonstrations were conducted by supervising officers in a controlled, training-oriented manner using sandboxed or sample data.

Within these boundaries, the internship covered classroom-style orientation on cyber law, guided walkthroughs of forensic and OSINT tools, structured discussion of investigation methodology, and participation in public cyber-awareness sessions. The scope did not extend to courtroom proceedings, prosecution strategy, or any activity requiring statutory police authority, all of which remained the responsibility of designated officers.

4.6 Technologies and Tools Used

During the internship, exposure was provided to a range of tools and platforms commonly used in cyber policing and digital forensic work. These tools were introduced through demonstrations and guided practice sessions rather than live casework, giving interns a working conceptual understanding of how each tool fits into the larger investigation workflow. Table 4.1 summarises the principal tools and platforms covered.

Sl. No.	Tool / Platform	Purpose in Investigation
1	Cyber Crime Reporting Portal (cybercrime.gov.in)	Filing and tracking of citizen complaints related to cyber fraud and online crime
2	Wireshark	Capturing and analysing network traffic during incident response
3	Autopsy / FTK Imager	Disk imaging and digital forensic examination of seized devices
4	OSINT Tools (Maltego, Shodan)	Open-source intelligence gathering for suspect and infrastructure profiling
5	CDR / IPDR Analysis Sheets	Call Detail Record and Internet Protocol Detail Record analysis for location and contact mapping
6	I4C Coordination Channels	Coordination with the Indian Cyber Crime Coordination Centre for inter-state cases
7	Social Media Monitoring Tools	Tracking of fraudulent profiles, phishing pages and misinformation campaigns

Table 4.1: Tools and Platforms Introduced During the Internship

4.7 System Architecture

Figure 4.1 illustrates the generalised workflow followed by the Amroha Police Cyber Cell when handling a cybercrime complaint, as explained and demonstrated during the internship. The process begins when a citizen reports an incident, either directly to the Cyber Cell or through the National Cyber Crime Reporting Portal, and proceeds through registration, evidence preservation, forensic analysis, and legal action, culminating in either case resolution or referral for court proceedings.

Fig. 4.1 Cybercrime Investigation Workflow followed at Amroha Police Cyber Cell

Fig. 4.1: Cybercrime Investigation Workflow followed at Amroha Police Cyber Cell

A key element of this architecture is the parallel documentation trail — the chain of custody record — which is maintained alongside every technical step to ensure that digital evidence remains admissible in court. Coordination with the Indian Cyber Crime Coordination Centre (I4C) enables the Cyber Cell to trace transactions and accounts across state boundaries, which is essential given that a large proportion of cyber-fraud perpetrators operate from outside the district or state.

4.8 Methodology

The internship was structured into the following phases:

- Orientation and Induction: Introduction to the organisational structure of Amroha Police, the mandate of the Cyber Cell, and internship guidelines.
- Classroom Sessions on Cyber Law: Sessions covering the Information Technology Act, 2000, relevant provisions of the Bharatiya Nyaya Sanhita, and procedures for registering an FIR in cyber-related offences.
- Hands-on Tool Demonstrations: Guided, supervised sessions on forensic imaging, network traffic analysis, and OSINT techniques using sample/training data.
- Case Study Discussions: Review of anonymised, illustrative cybercrime patterns (UPI fraud, sextortion, fake investment schemes) to understand investigative reasoning.

- **Field Exposure and Public Awareness Activities:** Participation in cyber-hygiene awareness sessions conducted by the Cyber Cell for local citizens and students.
- **Mentorship and Evaluation:** Regular interaction with supervising officers, periodic assessment of understanding, and a concluding evaluation prior to certification.

4.9 Expected Outcomes

Upon completion of the internship, the following outcomes were achieved:

- A practical understanding of how cybercrime complaints are processed within a district police cyber cell, from intake to resolution.
- Working familiarity with commonly used digital forensic and OSINT tools and their role in an investigation.
- A clearer understanding of the legal framework governing cybercrime in India and the procedural requirements for maintaining admissible digital evidence.
- Improved ability to connect academic cybersecurity knowledge with real-world law-enforcement constraints and workflows.
- Enhanced communication, teamwork, and public-outreach skills gained through participation in citizen awareness sessions.
- Successful completion of the program, evidenced by the Certificate of Completion (APCSIP/2026/387) issued by Amroha Police.

4.10 Certificate of Completion and Other Communication/Proof

The Certificate of Completion issued to the author by Amroha Police upon successful completion of the Amroha Police Cyber Security Internship Program (APCSIP-2026), bearing certificate number APCSIP/2026/387 and signed by Shri Lakhman Singh Yadav, Superintendent of Police, Amroha, is attached in Chapter 3 of this report (Internship Completion Certificate).
